

**STUDENT HANDBOOK
MASTER'S DEGREE**

USU Physics Department

(Updated November 6, 2013)

INTRODUCTION

It is the responsibility of each graduate student to understand the policies, regulations, and procedures of the School of Graduate Studies and his/her department and program. This handbook is designed as a resource for planning and guiding students through their graduate careers. It is not intended as a substitute for frequent meetings between the student and the Physics department faculty and staff, especially with the Department Advisor (DA), graduate student Tracking Committee (TC) and the student's Supervisory Committee (SC) (which includes the student's major professor).

This handbook is divided into the following sections.

USU Master's Program General Requirements (p. 2)

Physics Master's Program Requirements and Guidelines (p. 4)

USU MASTER'S PROGRAM GENERAL REQUIREMENTS

(Largely summarized from the USU General Catalog)

The USU requirements for master's degree programs are summarized below. Most of this information has been gleaned from the Utah State University General Catalog, which is available online at <http://www.usu.edu/generalcatalog>. Some of the information here has been obtained from various Graduate School documents. Keep in mind that if a conflict exists between the information found here and that provided by the General Catalog or Graduate School, then the General Catalog and Graduate School are the authoritative sources.

I. FULL TIME STATUS

The following summarize the requirements for maintaining status as a full-time master's student.

- Acceptance by the Department with the concurrence of the Graduate Dean.
- Registered for 9 or more semester credits; or
- Registered for 6 or more credits if employed as a graduate assistant for 15 or more hours a week (.375 FTE); or
- Registered for 3 graduate credits with all required coursework completed and only the research component of the degree remaining (the student's Program of Study must have been submitted to the School of Graduate Studies); or
- Registered for at least 3 graduate credits during the semester of the defense of the thesis or Plan B paper.
- Domestic masters students will be given until the last day of the next semester (known as a "grace" semester) following the defense to finish degree requirements. If a student has not completed all degree requirements by the end of the grace semester, the student must pay a \$100 Late Completion Fee for each semester following the grace semester. If working with faculty involves more than routine submission of the thesis or dissertation, registration for 3 or more cred-

its is required. **If all requirements are not completed within one year of the defense, the thesis or Plan B paper will need to be redefended.**

- An equivalent of the grace period is available to international doctoral students. Please see the USU General Catalog for details.
- Note: To defer a loan or to receive student loans, graduate students must be registered for **at least 6 credits.**

II. CREDIT / RESIDENCY / GRADE REQUIREMENTS

The minimum requirement for either a Plan A or Plan B master's degree is 30 semester credits. For a Plan A degree between 6 and 15 credits of thesis research credit are required. For a Plan B degree between 2 and 3 credits of thesis research are required.

Master's degree residency requirements are as follows: at least 24 semester credits for a master's degree must (i) be from USU and (ii) appear on the student's Program of Study form for the master's degree.

Provided these USU residency requirements will be met, a student's supervisory committee may recommend transfer of graduate credits earned at another accredited institution. The credits must **not** have been used for another degree. Up to 12 semester credits may be transferred into a graduate program at USU and used in the student's program of study. Transfer credits **cannot** replace the 24 USU credits required for residency. Credits more than eight years old are generally not acceptable. Transfer credits will be shown on official USU transcripts upon completion of the degree.

Graduate students are required to maintain at least a 3.0 GPA for courses in their degree program. Grades of C- or lower will not be accepted for a graduate degree.

III. SUPERVISORY COMMITTEE

A master's degree supervisory committee must include at least three faculty members who are approved by the department head and the dean of the School of Graduate Studies. At least one member must represent the student's area of specialization, and at least one must be from outside the specialization area. Adjunct faculty can be members with the approval of the dean of the School of Graduate Studies. Upon recommendation of the department head, emeritus faculty may serve on supervisory committees, but may not chair new committees.

Within School of Graduate Studies and departmental requirements, the supervisory committee determines the courses for the student's Program of Study; conducts departmental qualifying examinations (if required); supervises the student's thesis research or Plan B paper; and conducts the defense or final examination. The defense or final examination must be scheduled through the School of Graduate Studies. The major professor, who serves as the chairperson of the committee, usually directs the thesis, paper, or other degree project.

IV. PROGRAM OF STUDY

The original **Program of Study** form with signature in ink should be submitted to the School of Graduate Studies by the student **before the end of the second semester following matriculation**. Amendments to the Program of Study form can be made with an e-mail from the major professor to Joan Rudd (joan.rudd@usu.edu) with copies (in the cc: field) to all committee members. Submission of a new Program of Study is **not** necessary.

A. Plan A

The Plan A option for a master's degree requires preparation of a thesis. The semesters during which a student registers for thesis credit should correspond as closely as possible to the semesters in which the thesis work is done and faculty supervision is provided. The thesis for a Plan A master's degree is to be a contribution to the field of knowledge, based on the student's own research or a treatment and presentation of known subject matter from a new point of view. The student and major professor should decide upon a problem or subject for the thesis study by the end of the student's first semester of graduate study.

B. Plan B

The Plan B option requires the production of a paper or a creative work of art. At least 2 credits of thesis research are required, but no more than 3 credits of thesis credit can be included on the Program of Study. The Plan B paper is usually a review of literature, with conclusions drawn after conceptualizing an area of inquiry, planning a systematic search, and analyzing and critiquing the acquired information. The summary and conclusions developed should enhance knowledge in the discipline. Plan B papers and reports should follow the same format specifications as theses and dissertations and are expected to reflect equivalent scholarship standards, even though they may be less intensive and not demand the originality of a Plan A thesis. Plan B papers are defended, but are not reviewed by the School of Graduate Studies assistant dean or signed by the graduate dean. Plan B papers must be submitted to the Merrill-Cazier Library, and the binding receipt must be returned to the School of Graduate Studies.

PHYSICS MASTERS PROGRAM REQUIREMENTS AND GUIDELINES

I. INTRODUCTION

The purpose of this section is to help students and faculty understand the specific requirements associated with the Department of Physics master's degree programs. Section II summarizes the steps involved in obtaining the master's degree. Sections III - VIII describe each aspect of the master's program in detail. The information elaborates upon the general Graduate School requirements that are found in the preceding section. If a conflict exist between the information found here and that provided by the Graduate School, the Graduate School is the authoritative source.

II. SUMMARY OF THE MASTER'S PROGRAM

The Physics Department's master's degree programs consist of the following elements, in roughly chronological order:

- Matriculation and an initial advisement meeting with the departmental advisor (DA) and the graduate student Tracking Committee (TC) to acquaint student with the program and decide upon course work during the first semester.
- Establishment of the student's major professor and Supervisory Committee.
- Continued advisement/tracking through the TC, DA, and temporary advisor or major professor (throughout the student's time at USU).
- A set of required core courses (including Colloquium) and a Program of Study to be filed with the Graduate School.
- Fulfillment of the requirements of research, including written and oral presentations of that research.
- The time limit for completion of a master's degree is six years after matriculation.

III. MATRICULATION AND INITIAL ADVISEMENT

Matriculation into the program will include an initial meeting with the DA and/or the TC to determine the master's program that the student will undertake (Plan A or Plan B) and to determine the appropriate courses for the student in the first semester. **This initial meeting should take place in the week before the start of classes.**

IV. CONTINUED ADVISEMENT AND TRACKING

The purpose of continued advisement and tracking is to make sure that the student is satisfactorily progressing toward a Physics master's degree. Advisement and tracking of graduate students takes place continually while the student is in the program. Before the student has established his/her Supervisory Committee the majority of advising is done by the DA. After establishment of the Supervisory Committee the primary advising role falls naturally on the student's major professor. In order to help ensure that the student is making satisfactory progress the TC will meet with each student on at least a yearly basis, typically early in the Spring semester. **These meetings are mandatory for each student.** If the student is located away from the university during the scheduled time of the meeting, a phone interview with the TC will be conducted.

V. COURSES AND ASSOCIATED REQUIREMENTS

A. Required Courses

The course credit requirements for the Physics master's degree programs are as follows.

- Plan A: A total of 30 credits are required, with 6 – 15 as thesis research and the remaining credits coming from course work. A minimum of 4 (out of 10) core Ph.D. courses must be taken. The balance of course work must comprise graduate-level courses.
- Plan B: A total of 30 credits are required, with 2 - 3 (as thesis research) for writing the Plan B report and the remaining credits coming from course work. A minimum of 5 (out of 10) core Ph.D. courses must be taken. The balance of course work must comprise graduate-level courses.
- Each master's degree student is required to take (and pass) Physics Colloquium (Phyx 5800, 1 credit / semester) for four consecutive semesters, beginning with the first semester after matricu-

lation. If the student finishes the master's degree in fewer than four semesters, then this requirement is truncated to the number of semesters that the student is in the master's program.

Table I lists the PhD program core courses.

Table I. PhD Core courses. Each course is worth 3 credits

Course Title	Course Number
Methods Theoretical Physics I and II	Phys 5340 and 5350
Classical Mechanics I	Phys 6010
Electrodynamics I and II	Phys 6110 and 6120
Quantum Mechanics I	Phys 6210
Statistical Mechanics I	Phys 6410
Plasma Physics	Phys 6330
Solid State Physics	Phys 6530
Relativity	Phys 6910

B. Possible Waiver of Course Requirements

Students who have previously taken courses at another institution that are equivalent to courses required in Sec. V (A) may (1) ask to have their Supervisory Committee petition the graduate school to transfer up to 12 credits as part of their Program of Study and/or (2) ask that the previously taken courses fulfill appropriate course requirements in Sec. V (A). Such utilization of previously obtained credits are subject to Graduate School rules, discussed in detail above. **Any such waivers should be discussed with the DA, TA, and GTC upon entering the graduate program.**

C. Program of Study

A Program of Study form must be filled out and filed with the Graduate School. This form is filled out with help from the DA and/or the student's major professor. **The Program of Study must be approved by the student's Graduate Supervisory Committee before submission to the Graduate School. It must be filed with the Graduate School by the end of the student's second semester.**

VI. COURSE TEACHING SCHEDULE

Table II (next page) indicates the teaching schedule for graduate physics courses. The schedule is designed so that a student can easily start in the fall semester of either an odd or even calendar year.

Table II. Sequence of physics graduate courses

Fall (odd years)	Spring (even years)	Fall (even years)	Spring (odd years)
MTP (5340)	MTP (5350)	CM I (6010)	QM I (6210)
E&M I (6110)	E&M II (6120)	SM I (6410)	SS I (6530)
PoP (5500)	Plasma I (6330)	PoP (5500)	Rel I (6910)
Colloquium (5800)	Colloquium (5800)	Colloquium (5800)	Colloquium (5800)

VII. STUDENT'S SUPERVISORY COMMITTEE

The student's Supervisory Committee consists of a major professor (who usually is the main advisor to the student during the research phase of Ph.D. degree) and at least two other faculty members. The student's Supervisory Committee is the key connection between the student and the student's successful completion of the research part of the degree.

The basic timeline regarding the student's Supervisory Committee is outlined as follows:

- The student chooses a major professor **during the first or second semester** after matriculation.
- The student forms the Supervisory Committee **no later than the end of second semester** after matriculation. The Supervisory Committee Approval Form must be filled out and submitted to the School of Graduate Studies.
- The Committee approves the Program of Study, which must be filed with the Graduate School **by the end of the second semester**.
- For Plan A (Plan B) students the Committee approves the Thesis (Report) Proposal **no later than the end of the third semester**.
- For Plan A students the Thesis Proposal coversheet is signed by the Committee and submitted to the Graduate School (before defense of the thesis).
- The Committee, especially the major professor, mentors the student in his/her research.
- The Committee reads the thesis or report and participates in the student's Defense Examination.

Many of the above steps require that a form be submitted to the School of Graduate Studies. These forms can be found at http://www.usu.edu/graduateschool/apply/current_forms.cfm.

VIII. RESEARCH PROGRAM

There are research aspects to both master's degree programs. These are delineated below.

A. Plan A

The first stage of the research process is to become acquainted enough with a specific area of research that a Thesis Proposal can be drafted and submitted to the student's Supervisory Committee. The Thesis Proposal must be approved by the student's committee. **Approval of the Thesis Proposal should occur no later than the end of the third semester after matriculation.** After approval, a signed copy of the Thesis Proposal is submitted to the Graduate School.

After approval of the Thesis Proposal (or some modified version) the student should focus on his/her research project. Completion of the research project can take anywhere from one to two years, typically.

The Physics Department requires each Plan A student to present at least one research seminar associated with his/her research. **At a minimum there is a mandatory seminar associated with the Thesis Defense.** Students are also urged to present a talk to a local research group, or at a regional, national, or international conference, or at another institution.

After completion of the research the student is required to write a thesis on the research. As part of the Thesis Defense, a public seminar on the material in the thesis will be presented. Immediately following the public seminar, the thesis is defended before the student's Supervisory Committee.

B. Plan B

The first stage of the research process is to become acquainted enough with a specific area of research that a Report Proposal can be drafted and submitted to the student's Supervisory Committee. **The Report Proposal must be submitted to the student's committee no later than the end of the third semester after of matriculation.**

After approval of the Report Proposal (or some modified version) the student should focus on his/her research project. Completion of the research project nominally takes one semester, during which the student is should also be engaged in coursework.

The Physics Department requires each Plan B student to present at least one research seminar associated with his/her research. **At a minimum there is a mandatory seminar associated with the Report Defense.** Students are also urged to present a talk to a local research group, or at a regional, national, or international conference, or at another institution.

After completion of the research the student is required to write a report on the research. As part of the Report Defense, a public seminar on the material in the report will be presented. Immediately following the public seminar, the report is defended before the student's Supervisory Committee.
